

SECOND DELIVERABLE

- Develop schedule
- Action items
 1. A description of the type of all natural hazards that can affect the jurisdiction. At a minimum the Plan must address the following hazards: earthquakes, tsunamis, coastal and riverine erosion, landslides/sinkholes, hurricanes and coastal storms, severe storms/tornadoes, floods, wildfires, dam/levee failure, drought/heat wave, and winter storms/freezes. The description must document how any additional hazards were identified. If any of the above hazards are excluded, the Plan must document why they were excluded from the jurisdiction's hazard analysis.
 2. A description of the location and extent of each identified hazard that can affect the jurisdiction. The Plan shall include information on previous occurrences of hazard events and on the probability of future hazard events for each identified hazard. When appropriate, the hazard analysis should also identify on a map the areas affected by each identified hazard.
 3. A description of the jurisdiction's vulnerability to each identified hazard. The description shall include an overall summary of each identified hazard and its impact on the community.
 4. A description of vulnerability in terms of the types and numbers of existing buildings, infrastructure, and critical facilities located in each identified hazard area. A rationale for designating a facility as critical shall be included in this section. In the first update of the Plan the vulnerability description should also include a discussion of future buildings infrastructure and critical facilities, and the potential human and economic impact that each identified hazard would have on the jurisdiction.
 5. A description of vulnerability in terms of an estimate for each identified hazard of the potential dollar losses of vulnerable structures identified and a description of the methodology used to prepare the estimates.
 6. A general description of land uses and development trends within the jurisdiction so that mitigation options can be considered in future land use decisions.
 7. An assessment of each jurisdiction's risks where they vary from the risks facing the entire planning area for each identified hazard.
- Second Deliverable due **MARCH 30, 2004**
